

0.8.2

What's new

- It is now possible to joint or remove files (topics, tasks, notes or decisions) during planning, holding and review of the meeting.
- Files from tasks can be added or removed from Beespace or from the tasks register.
- Topic's files can be replaced during the planning in an ongoing meeting.

Modifications

- Filters has been added to the Beespace to view meetings for the day, next day or the next seven days.
- Improved performance for iOS devices from past generations
- Automatic recording is now possible with the IE11 browser.
- Search is extended to meeting's topics.
- Clarification and highlighting of the displayed message when the browser is not supported by Beenote.

Corrections

- Standby on a device could lock the meeting when it's done.
- 12/24H time format was reset to the selected language.
- Records could not be read in reports.
- It was possible to assign a task to someone outside the organization.
- Automatic recording could corrupt the meeting if it was controlled by two users.
- The Folder field was empty in planning instead of proposing the last folder used.
- Continuous improvement of text display and alignment and icons for a more enjoyable visual experience.
- Minors problems correction.
